

ULTRA LIGHT PROTECTIVE BLANKET

Ideal for Perishable Shipments

The Blueye Protective Blanket is the only shipping cover that is breathable, which allows oxygen to reach the sensitive produce, therefore inhibiting irreversible damage and extending the shelf life.

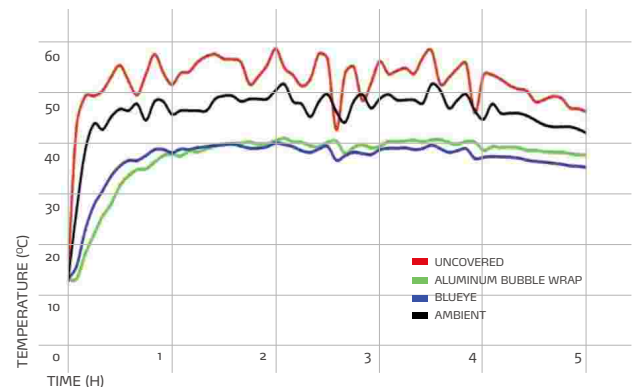

The Blueye Protective Blanket provides high levels of thermal protection from solar radiation. The reflective properties of the blanket keep the load naturally cooler than any other reflective covers on the market, including aluminum foil.

The material properties allow for rapid cooling of the load when placed in storage and transportation facilities, thus reducing cooling times and cost while quickly reducing the damaging effects of heat.

The flexibility of the blanket creates natural air pockets around the load, allowing for cool air to circulate and keep the products at a desirable temperature.

Added Benefits

- Quick and easy to apply
- Fraction of the cost to many other covers on the market
- Extremely light weight, approximately 2 kg
- Fully encloses the shipment thus providing protection from precipitation, condensation and debris.
- Can be made tamper evident
- 100% recyclable
- Tear resistant

The graph shows the load temperature of common shipment covers compared to the Blueye Blanket when exposed to the sun on tarmac

Extremely compact and light weight, weighing only 2 kg

Quick and easy to apply, only takes 7-8 minutes with 2 people

Breathable, reduces product damage and condensation
